

CommLighter™ UC900 Commercial Signs

- Install internally-lighted signs to enhance your marketing efforts!
- Bright LED lighting reduces energy consumption over traditional fluorescent and neon lighting!
- Battery and solar operated models available!

Our newest LED sign family provides an attractive, energy-saving alternative to traditional signs for your "message". Use these signs in any place you would use a traditional neon or fluorescent sign and reduce your sign lighting energy costs by up to 90%. Install several LED signs instead of just one for greater exposure.

Durable aluminum frame with UV-resistant acrylic sign face presents an attractive sign display for many years. Internally mounted lighting components are protected from the outside elements and damage. Bright LED lighting highlights your message for hundreds of feet in each direction. An optional blinking mode is available to improve eye-catching visibility.

The concept is simple. Our ListingLighter™ LED technology has been adapted to a commercial sign. This greatly reduces energy requirements over traditional neon and fluorescent lighting.

Customize the sign easily with your own color logo and message. Double-sided models are available, enabling artwork to be shown on both sides of the sign. Call for details.

For more information, see the Ordering Information table on page 2.
