

ListingLighter™ Solar Residential Yard Sign

- Improve your local marketing presence by advertising at night and be seen 24-hours a day!
- No maintenance required after setup with solar recharged battery lighting system.

Our new real estate marketing signs are the talk of the industry. They are extending the hours of marketing exposure for sale properties and increasingly stand out in a crowded market.

The concept is simple. Our patented solar signs have built-in solar panels to recharge the internal battery. The light turns on at dusk and operates for up to five hours, before turning off for the night. The next day the battery recharges and the cycle starts all over.

Turn the sign on for constant light or set it to blink for an open house or other special occasion. Translucent housing radiates the internal light for hundreds of feet in each direction.

Customize the sign easily with your own color logo and message. Select from solar-battery and battery-only models.

These new signs are designed with many features found in the expensive commercial signs, but at a fraction of the price. Rugged, shatter-resistant plastic housing is constructed of UV-resistant sign grade plastic for year-round durability. Steel anchor and internal support provide the backbone for the sign. Internal rechargeable battery is designed to operate for weeks without maintenance. The new state-of-the-art LEDs and electronics have been tested to provide years of trouble-free operation. Protective anti-theft lock secures protects the internal battery and electronics. 40"H x 24" W x 7" D. 28 lbs Shpg. Wt. One year warranty.

Special Features

- Bright, colorful sign works day and night.*
- No maintenance with built-in solar-powered battery charger.*
